

INT.

Culinary Meets
Technology:
The *Chef* 🍷 33
Flutter Case

About the Client

Chef33 introduces a groundbreaking food donations app, uniting individuals, businesses, and organisations in the fight against hunger. This user-friendly app empowers users to make a significant impact on their communities by effortlessly purchasing meals and ensuring they reach those in need.

Problem Statement

Chef33 aimed to create an aggregator platform bridging the gap between home chefs and end customers. They needed a solution that allowed home chefs to register, set schedules, and offer their culinary creations, while enabling end customers to collect food and pay for their orders.

Business Solution

INT. stepped in with a mobile application solution built using Flutter. The app provided a seamless platform for home chefs to register, define their schedules, and showcase their culinary offerings. End customers could easily browse, order, and collect food from these chefs, streamlining the entire process

01.

Enhanced User Experience

The app allowed home chefs to register and create profiles, giving them a platform to showcase their culinary talents

02.

Faster Feature Deployment

End customers could browse chef offerings, place orders, and make secure payments directly through the app

03.

Seamless Cross-Platform Compatibility

Home chefs could set their availability and schedules, ensuring a hassle-free experience for both chefs and customers

Business Impacts

The solution provided by INT. had a profound impact on Chef33's business

01.

Revenue Generation

Chef33 began earning revenue as an aggregator, facilitating financial opportunities for home chefs while contributing to the fight against hunger

02.

Empowering Home Chefs

The platform empowered home chefs by providing them with a channel to earn money through their culinary skills, fostering entrepreneurship in the culinary world
